

deloitte.com/us/state-of-ai

core processes and operating models with AI, ensuring that human strengths—such as judgment, creativity, empathy, and relationship-building—are elevated, not automated.

impacting trust and competitiveness; Agentic AI is enabling autonomous reasoning and action, raising new governance and control challenges; Physical AI is merging the digital and material

they continue on their journey with AI.

optimizing what already exists.

* Figures may not sum to 100% due to rounding.

77% of surveyed companies say the location of AI development is a key factor when choosing new technologies.

74%

Nearly 3 in 4 companies plan to
deploy agentic AI within two years.

42%

of companies believe their strategy is highly prepared for AI adoption.

innovation potential are still largely untapped.

Question: In your estimation, what percentage of your AI experiments
(e.g., pilots, test cases, etc.) have been deployed to date into your
organization (moved into production)?
N=3,235

you are likely to see pilot fatigue.”

hundred pilots just leads to poor results and failed value creation.”

● Achieving today ● Hope to achieve

Question: With regards to benefits from your AI efforts: Which benefits are you achieving today? Which benefits do you hope to achieve?
N=3,235

and make it pervasive everywhere. But we also wanted to disrupt the market.”

* Figures may not sum to 100% due to rounding.

36% of surveyed companies expect at least 10% of their jobs to be fully automated within a year.

workforce to raise overall AI fluency	implementing upskilling and reskilling strategies	talent acquisition levels and hiring specialized talent to drive AI initiatives	career paths and career mobility strategies	to the anticipated supply and demand of skills	performance-based incentives for leveraging AI	reimagining organizations based on new work patterns resulting from AI usage	worker trust and engagement	between full-time, contract and gig workers
---------------------------------------	---	---	---	--	--	--	-----------------------------	---

Question: How is your organization adjusting its talent strategies because of the adoption of AI tools/capabilities?
N=3,235

(figure 5).

● Slightly important

● Very important

Question: How important are data residency constraints and in country/region compute considerations to your organization's strategic planning?

* Figures may not sum to 100% due to rounding.
N=3,235

● Slightly concerned

● Very concerned

Question: To what extent are you concerned about your organization's reliance on foreign-owned AI technologies and compute provision?

N=3,235

with some of those customers to do a distilled small language model for them that meets the import/export control rules because we build

ecosystem) a company has the ability to innovate securely and responsibly.

Those early exploration efforts are now starting to translate into real-world use and are poised to drive the sharp rise in adoption expected in the

● Not at all ● Minimal usage ● Moderate usage ● Extensive usage ● Fully integrated

85%

of companies expect to customize agents to fit the unique needs of their business.

force multipliers where they can be more effective.”

a mature model for governance of
autonomous agents.

a concern. In some organizations, leaders are learning AI models have been deployed

the very risks they failed to address.

0% Other and no concerns

Question: Which of the following risks related to AI tools / applications is your organization most concerned about?
N=3,199

80% within two years—with 15% using physical AI extensively and 3% fully integrating it as a core element of their operations (figure 9).

development cycles, stricter safety regulations, and the need for specialized hardware and maintenance.

Americas N=3,235, EMEA N=1,1 /0, AP N=4/5

complex and unpredictable.

Question: Which area of physical AI do you believe will have the greatest impact on your industry?

* Figures may not sum to 100% due to rounding.

N=3,235

certification, and ongoing monitoring.

time and cost to deployment but are essential for responsible adoption.

these costs risk project delays or abandonment partway through implementation.

● Not prepared ● Slightly prepared ● Moderately prepared ● Highly prepared

Question: For each, rate your organization's level of preparedness with respect to broadly adopting AI tools/applications.

* Figures may not sum to 100% due to rounding.

N=3,235

◆ Percentage point change vs last year

So yes, companies prepared, but for a different future.
GenAI needs a new set of capabilities.”

Ensure solutions align with real workflows.

Leaders that treat pilots as stepping stones to production, not isolated experiments, are likely to achieve faster and more durable impact.

Streamline workflows that AI can execute end-to-end, while humans focus on judgment, exception handling, and strategic oversight. The goal isn't

rather than layering AI onto legacy processes.

clear, adaptive guardrails that allow responsible progress at speed.

experimentation and seamless scaling. They break down silos with domain-owned data products and embed privacy, sovereignty, and

legacy constraints, rather than digitizing old processes. This extends to reimagining business models and adapting to emerging trends like

rather than hype. The strategic opportunity is discovering new sources of value that competitors cannot easily replicate.

enterprise value.
