

Scaling AI

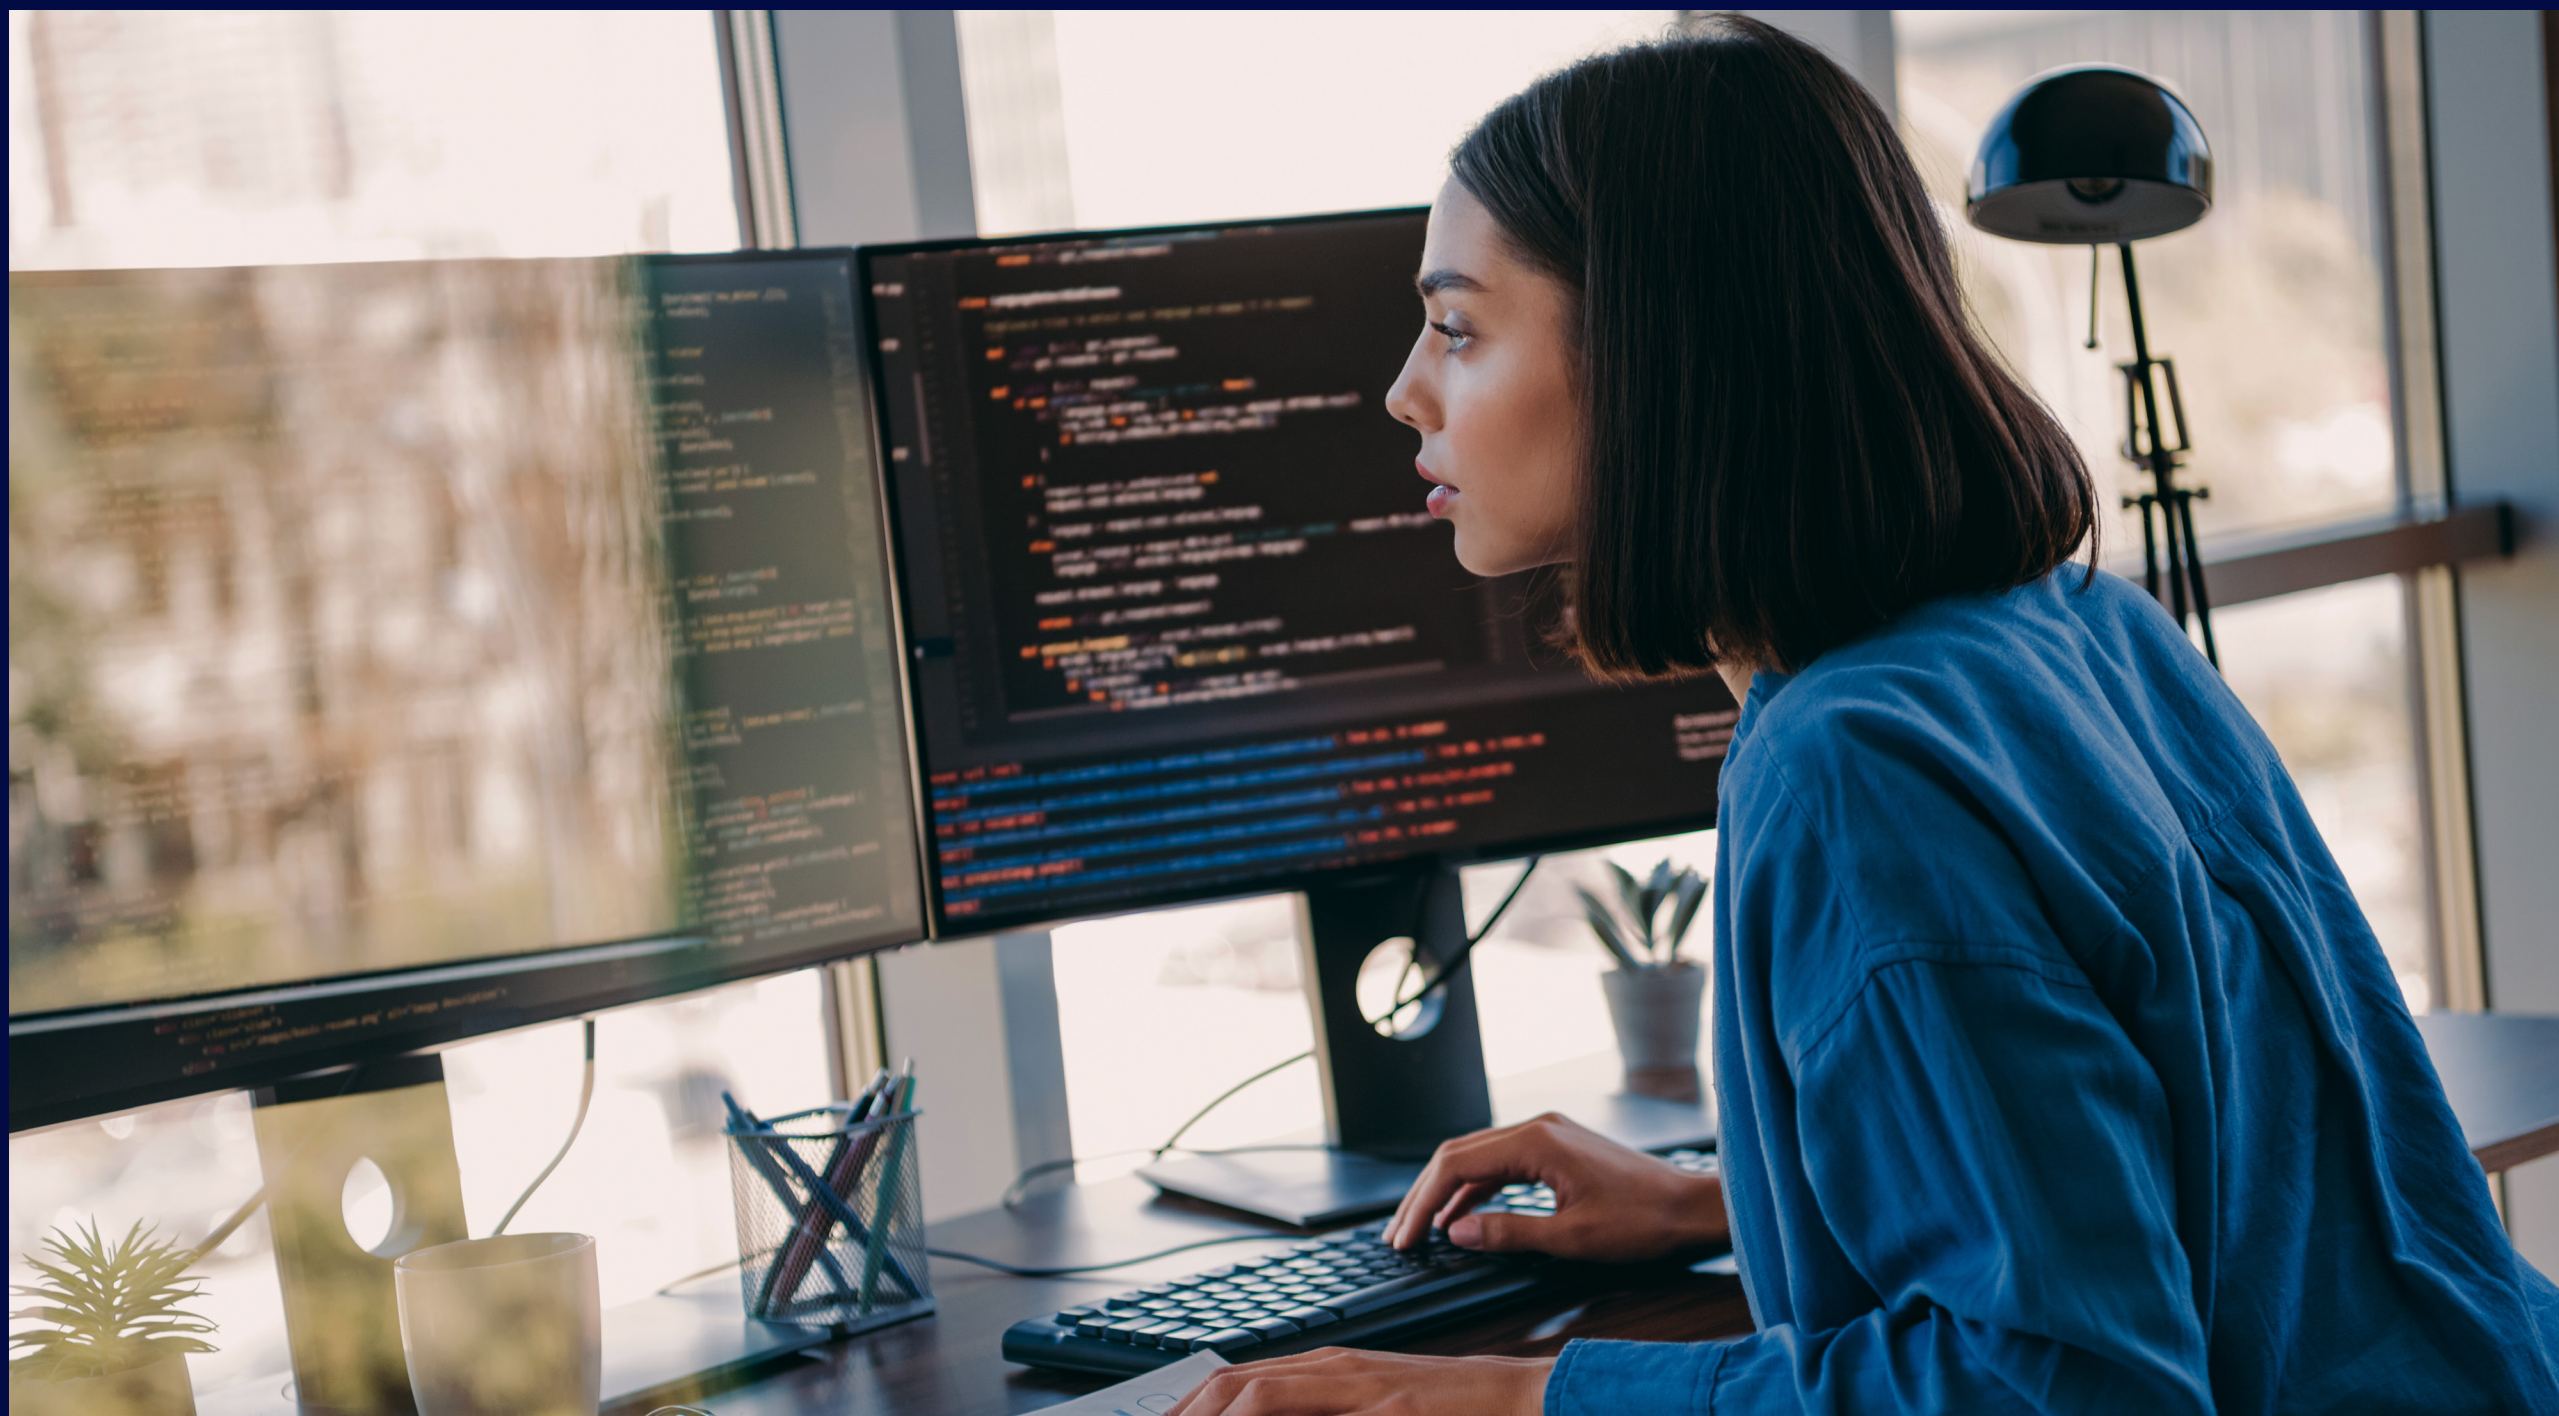

The factors influencing how
AI is deployed in banking >

Deploying AI systems starts with
decisions on:

- ✓ what data can be used
- ✓ how transparent the systems must be
- ✓ how they are monitored once live

AI cannot be deployed the same way everywhere. Markets impose different rules, shaping where AI systems can run and how platforms are designed.

“

As part of responsible and client-centric AI adoption, we prioritise adhering to principles of fairness, ethics, accountability, and transparency as the scope of data processing expands.

David Hardoon

Global Head of AI Enablement,
Standard Chartered

Human understanding, training,
and oversight remain critical to
using AI appropriately, especially
where outcomes affect customers
and regulators.

“

We're harnessing the opportunities of AI across the cyber stack and enabling the bank to use AI securely and safely.

Cezary Piekarski

Group Chief Information Security Officer,
Standard Chartered
